Public title
A randomized patient-and-physician blinded, placebo- controlled, 24 -week study to assess the safety, tolerability and efficacy of LMB763 in patients with diabetic nephropathy

Acronym

Scientific title
A randomized patient-and-physician blinded, placebo- controlled, 24 -week study to assess the safety, tolerability and efficacy of LMB763 in patients with diabetic nephropathy

Acronym

Brief summary of the study: English

LMB763 addresses fibrosis, oxidative stress, inflammation and cell death, and therefore has the potential to improve the management of diabetic kidney disease when added to the standard of care (angiotensin converting enzyme inhibitor or angiotensin receptor blocker). This non-confirmatory Phase 2 study is designed to determine the safety, tolerability, efficacy, pharmacokinetics and pharmacodynamics of LMB763 in combination with maximally tolerated doses of angiotensin converting enzyme inhibitor (ACEI) or angiotensin receptor blocker (ARB) in patients with type 2 diabetes and nephropathy.

Brief summary of the study: Arabic

أسبوعًا عشوائيّة التوزيع ومزدوجة التعمية من جهة المريض والطبيب ومرتكزة على المقارنة بدواء وهميّ لتقييم سلامة24دراسة من LMB763 وقدرة تحمّل وفعاليّة دواء لدى المرضى المصابين باعتلال الكلية السكري

Health conditions/problem studied: Specify
Patients with Diabetic Nephropathy

Interventions: Specify

•Drug: LMB763
LMB763 capsule

•Other: Placebo
Placebo capsule

Key inclusion and exclusion criteria: Inclusion criteria

Inclusion Criteria:
•Male/female patients, 18-75 years
•Written informed consent
•Diagnosis of Type 2 diabetes mellitus, with diagnosis made at least 6 months prior to screening
•Diabetic nephropathy as evidenced by Urine albumin-Cr ratio (UACR) ≥300 mg/g Cr while receiving a maximally tolerated (optimal) dose of angiotensin converting enzyme inhibitor or angiotensin receptor blocker

Key inclusion and exclusion criteria: Gender

Both

Key inclusion and exclusion criteria: Specify gender

Key inclusion and exclusion criteria: Age minimum

18

Key inclusion and exclusion criteria: Age maximum

75

Key inclusion and exclusion criteria: Exclusion criteria

Exclusion Criteria:
•History of type 1 diabetes mellitus
•Severe renal impairment manifesting as serum creatinine eGFR < 30 mL/min/1.73 m^2 at screening
•Pregnant or nursing (lactating) women
•Women of child-bearing potential, unless they are using highly effective methods of contraception during dosing and for 5 days after stopping study medication
•Uncontrolled diabetes mellitus
•History or current diagnosis of ECG abnormalities
•History of kidney disease other than diabetic nephropathy

IMP has market authorization: Specify

Name of IMP

LMB763 (Nidufexor)

Year of authorization

Month of authorization

Type of IMP

Others

Pharmaceutical class

Nidufexor (LMB763) is a potent partial agonist of the Farnesoid X Receptor (FXR).

Therapeutic indication

Patients with intrahepatic cholestasis and for non-alcoholic steatohepatitis (NASH), and diabetic nephropathy.

Therapeutic benefit

•effect of LMB763 to placebo on albuminuria in patients with diabetic nephropathy already receiving treatment with an angiotensin converting enzyme inhibitor (ACEI) or angiotensin receptor blocker

Biospecimen retention

Samples with DNA**

Biospecimen description

All blood samples will be sent to Covance-central laboratories, as per study protocol to assess patient disease response following treatment administration. Primary plasma samples for PK are stored at the bioanalytical lab (Veeda – address below) and are destroyed 6 months after study finalization.
