| Public title | Acronym |
| Evaluating the Long-Term Outcomes and Durability of Effect Following Treatment with Cladribine Tablets for Multiple Sclerosis | |
| Scientific title | Acronym |
| An Exploratory Phase IV Ambispective Study of Patients Who Previously Participated in the CLARITY/CLARITY-EXT and ORACLE MS Clinical Trials | |
| Brief summary of the study: English | |
| The purpose of this study is to explore the long-term outcomes, durability of effect, and real-world treatment patterns in patients previously participating in the Phase III ORACLE MS and CLARITY/CLARITY-EXT clinical trials (i.e. parent studies). The results from this study may be of benefit to patients with multiple sclerosis (MS) and clinicians by helping to inform future reatment approaches and treatment decision-making. | |
| Brief summary of the study: Arabic | |
| تقييم النتائج طويلة الأمد و مدّة تأثير العلاج بأقراص Cladribine عند مرضى مصابين بتصلب المتعدد | |
| Health conditions/problem studied: Specify | |
| Multiple Sclerosis | |

No Intervention, except:

*Optional blood sample: Patients willing to consent to provide an optional blood sample and who are seen at a site with available capabilities to store and ship samples, will have a blood draw taken at Study Visit 1 for pharmacogenetics testing.

Key inclusion and exclusion criteria: Inclusion criteria

1. Patients with MS randomised in CLARITY/CLARITY-EXT clinical trial(s) who have received ≥ 1 course of IMP (Cladribine Tablets or

Lebanon Clinical Trials Registry

| Primary Outcomes | | |
|--|--|---|
| Name | Time Points | Measure |
| To evaluate long-term mobility after treatment with an investigational medicinal product (IMP; Cladribine Tablets or placebo) as part of the Phase III ORACLE MS and CLARITY/CLARITY-EXT clinical trials. | Proportion of study participants using a wheelchair (defined as unable to walk beyond approximately 5 meters even with aid, essentially restricted to wheelchair; wheels self in standard wheelchair and transfers alone; up and about in wheelchair some 12 hours a day) the majority of the time in the 3 months prior to Study Visit 1 for the CLARITY/CLARITY-EXT and ORACLE MS populations, | • Expanded Disability Status Scale (EDSS) score of 7.0 or higher (if available), or • Alternative clinical description data in medical records. |

Lebanon Clinical Trials Registry

| Key Secondary Outcomes | | | |
|---|--|---|--|
| Name | Time Points | Measure | |
| To assess the long-term disability status after treatment with IMP as part of the Phase III ORACLE MS and CLARITY/CLARITY-EXT clinical trials for the CLARITY/CLARITY-EXT and ORACLE MS populations. | Proportion of study participants with 3-month sustained (i.e. ambulatory disability consistent with EDSS on at least 2 clinic visits no less than 3 months apart) | EDSS of 6.0 or higher in the last year prior to enrollment or corresponding clinical description in medical records | |
| To evaluate differences in clinical characteristics between long-term responders and study participants requiring alternate therapies following treatment with IMP for the CLARITY/CLARITY-EXT and ORACLE MS populations. | Clinical characteristics at Study Visit 1 of long-term responders (defined as study participants who did not demonstrate any evidence of disease reactivation based on Investigator assessment of clinical and imaging outcomes until Year 4 or later following their last doseb of IMP and who did not receive disease modifying treatment until Year 4 or later following their last doseb of IMP) compared to those of other study participants who started on alternate therapy less than 4 years following their last doseb of IMP for the CLARITY/CLARITY- EXT and ORACLE MS populations. | | |
| To evaluate differences in magnetic resonance imaging (MRI) characteristics between long-term responders and study participants requiring alternate therapies following treatment with IMP for the CLARITY/CLARITY-EXT and ORACLE MS populations. | MRI characteristics at Study Visit 2 of long-term responders (defined as study participants who did not demonstrate any evidence of disease reactivation based on Investigator assessment of clinical and imaging outcomes until Year 4 or later following their last doseb of IMP and who did not receive disease modifying treatment until Year 4 or later following their last doseb of IMP) compared to those of other study participants who started on alternate therapy less than 4 years following their last doseb of IMP for the CLARITY/CLARITY- EXT and ORACLE MS populations. | - | |
