Public title	Acronym
Study Assessing the Efficacy and Safety of Alpelisib + Nab- paclitaxel in Subjects With Advanced TNBC Who Carry Either a PIK3CA Mutation or Have PTEN Loss Without PIK3CA Mutation	
Scientific title	Acronym
A Phase III, Multicenter, Randomized, Double-blind, Placebo- controlled Study to Assess the Efficacy and Safety of Alpelisib (BYL719) in Combination With Nab-paclitaxel in Patients With Advanced Triple Negative Breast Cancer With Either Phosphoinositide-3-kinase Catalytic Subunit Alpha (PIK3CA) Mutation or Phosphatase and Tensin Homolog Protein (PTEN) Loss Without PIK3CA Mutation	
Brief summary of the study: English	
The purpose of this study is to determine whether treatment with alpelisib in combination with nab-paclitaxel is safe and effective in subjects with advanced triple negative breast cancer (aTNBC) who carry either a PIK3CA mutation (Study Part A) or have PTEN loss without PIK3CA mutation (Study Parts B1 and B2)	
Brief summary of the study: Arabic	
، مزدوجة التعمية، مرتكزة على المقارنة بدواء وهمى في المرحلة الثالثة، لنقييم فعاليّة وسلامة البيليسيب ، الثلاثي السلبي المتقدم إمّا مع طفرة (nab-paclitaxel) بالاشتر اك مع ناب باكليّتاكسيل (BYL719) PIK بدون طفرة في جين PTEN أو مع فقدان البروتين مماثل الفوسفاتاز والتنسين PIK3CA في جين	لدى المرضى المصابين بسرطان الثدي
Health conditions/problem studied: Specify	
Triple Negative Breast Neoplasms	
Interventions: Specify

#### REPUBLIC OF LEBANON MINISTRY OF PUBLIC HEALTH Lebanon Clinical Trials Registry

Drug: alpelisib 300 mg orally once per day (QD) Other Name: BYL719 Drug: placebo 300 mg orally once per day (QD) Other Name: alpelisib matching placebo Drug: nab-paclitaxel 100 mg/m<sup>2</sup> as IV infusion on Days 1, 8 and 15 of a 28-day cycle Other Name: abraxane

#### Key inclusion and exclusion criteria: Inclusion criteria

Subject has histologically confirmed diagnosis of advanced (loco-regionally recurrent and not amenable to curative therapy, or metastatic (stage IV)) TNBC

Subject has either a measurable disease per RECIST 1.1 criteria or, if no measurable disease is present, then at least one predominantly lytic bone lesion or mixed lytic-blastic bone lesion with identifiable soft tissue component (that can be evaluated by CT/MRI) must be present Part B1: patients must have measurable disease

Subject has adequate tumor tissue to identify the PIK3CA mutation status (either carrying a mutation or without a mutation) and the PTEN loss status; both of which will determine whether the subject can be allocated to Part A - PIK3CA mutation regardless of PTEN status; or to Part B - PTEN loss without a PIK3CA mutation

Subject has an Eastern Cooperative Oncology Group (ECOG) performance status of 0 or 1 Subject has received no more than one line of therapy for metastatic disease.

Subject has adequate bone marrow and organ function

Key inclusion and exclusion criteria: Gender

Both

Key inclusion and exclusion criteria: Age minimum

18

#### Key inclusion and exclusion criteria: Exclusion criteria

Subject has received prior treatment with any PI3K, mTOR or AKT inhibitor

Subject has a known hypersensitivity to alpelisib, nab-paclitaxel or to any of their excipients

Subject has not recovered from all toxicities related to prior anticancer therapies to NCI CTCAE version 4.03 Grade ≤1; with the exception of alopecia

Subject has central nervous system (CNS) involvement

Subject with an established diagnosis of diabetes mellitus type I or uncontrolled type II based on Fasting Plasma Glucose and HbA1c Subject has impairment of gastrointestinal (GI) function or GI disease that may significantly alter the absorption of the study drugs (e.g., ulcerative diseases, uncontrolled nausea, vomiting, diarrhea, malabsorption syndrome, or small bowel resection) based on investigator discretion

Subject has a history of acute pancreatitis within 1 year of screening or past medical history of chronic pancreatitis

Subject has currently documented pneumonitis/interstitial lung disease

Subject has a history of severe cutaneous reactions, such as Steven-Johnson Syndrome (SJS), erythema multiforme (EM), Toxic Epidermal Necrolysis (TEN) or Drug Reaction with Eosinophilia and Systemic Syndrome (DRESS)

Subject with unresolved osteonecrosis of the jaw

Other protocol-defined inclusion/exclusion criteria apply.

#### Type of study

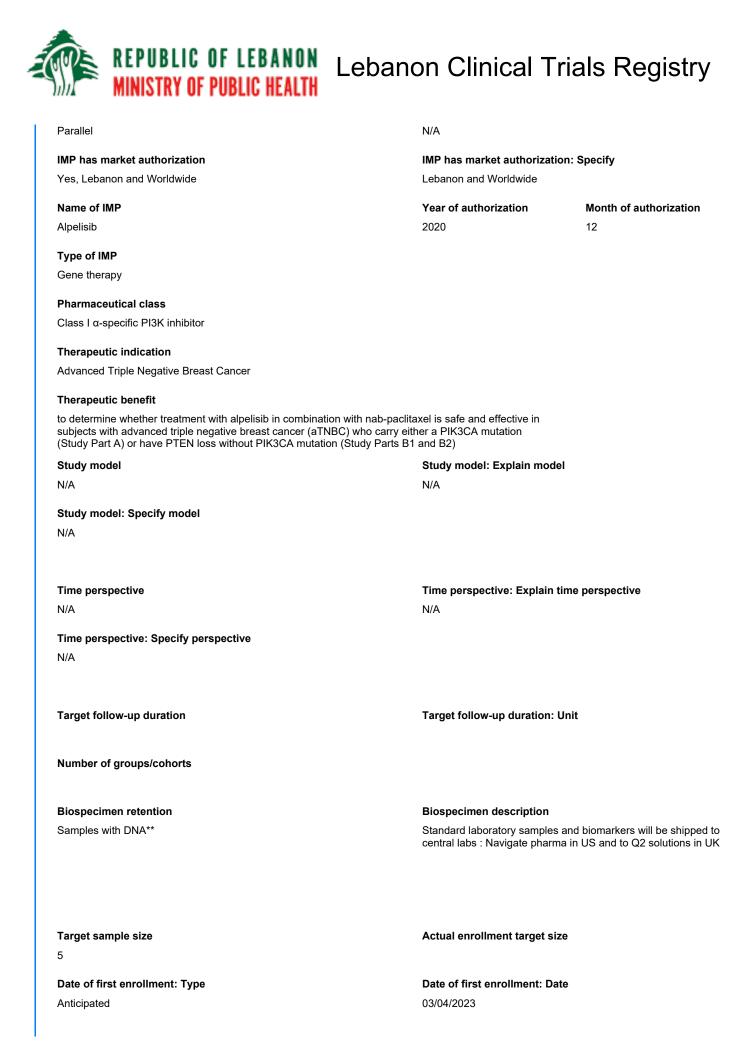

Interventional

Type of intervention	Type of intervention: Specify type
