Health conditions/problem studied: Specify

Advanced Breast Cancer

Interventions: Specify

•Drug: Ribociclib
•Drug: Letrozole
•Drug: Goserelin

Key inclusion and exclusion criteria: Inclusion criteria

•Male or female advanced (locoregionally recurrent or metastatic) breast cancer not amenable to curative therapy.

•In the case of women, both pre/perimenopausal and postmenopausal patients are eligible

•Patient has a histologically and/or cytologically confirmed diagnosis of estrogen-receptor positive and/or progesterone receptor positive breast cancer

•Patient has HER2-negative breast cancer defined as a negative in situ hybridization test or an IHC status of 0, 1+ or 2+. If IHC is 2+, a negative in situ hybridization (FISH, CISH, or SISH) test is required

•Patient has an Eastern Cooperative Oncology Group (ECOG) performance status ≤2

•Patient has adequate bone marrow and organ function as defined by ALL of the following laboratory values (as assessed by local laboratory):
◦Absolute neutrophil count ≥ 1.5 × 10^9/L
◦Platelets ≥ 100 × 10^9/L
◦Hemoglobin ≥ 9.0 g/dL
◦Potassium, sodium, calcium corrected for serum albumin and magnesium within normal limits or corrected to within normal limits with supplements before first dose of the study medication
◦INR ≤1.5
◦Serum creatinine <1.5 mg/dl or creatinine clearance≥50 mL/min
◦In absence of liver metastases, alanine aminotransferase (ALT) and aspartate aminotransferase (AST) should be below 2.5 × ULN. If the patient has liver metastases, ALT and AST should be < 5 × ULN.
◦Total serum bilirubin < ULN; or total bilirubin ≤ 3.0 × ULN with direct bilirubin within normal range in patients with well-documented Gilbert's Syndrome

•Patient must have a 12-lead ECG with ALL of the following parameters at screening:
◦QTcF interval at screening <450 msec (using Fridericia's correction)
◦Resting heart rate ≥ 50 bpm
