Safety Study of Crushed Deferasirox Film Coated Tablets in Pediatric Patients With Transfusional Hemosiderosis (MIMAS)

06/07/2025 17:47:04

Main Information

Primary registry identifying number
LBCTR2019030206

Protocol number
CICL670F2429

MOH registration number
32772/2018

Study registered at the country of origin
Yes

Study registered at the country of origin: Specify

Type of registration
Retrospective

Type of registration: Justify
LCTR was recently initiated, original file was previously submitted by Paper

Date of registration in national regulatory agency
01/08/2018

Primary sponsor
Novartis Pharma Services Inc.

Public title
Safety Study of Crushed Deferasirox Film Coated Tablets in Pediatric Patients With Transfusional Hemosiderosis (MIMAS)

Acronym

Scientific title
A Single-arm Interventional Phase IV, Post-authorisation Study Evaluating the Safety of Pediatric Patients With Transfusional Hemosiderosis Treated With Deferasirox Crushed Film Coated Tablets

Acronym

Brief summary of the study: English
The study employs an interventional, prospective, single arm, open label, global, multicenter,non-randomized trial design to monitor and assess the safety profile of the crushed deferasirox FCT in pediatric patients between age ≥2 to <6 with transfusional hemosiderosis over 24 weeks. This study will aim to enroll at least 40 patients.

Brief summary of the study: Arabic
دراسة تدخلية وحيدة المجموعة في المرحلة الرابعة بعد الترخيص لتقييم سلامة المرضى الاطفال المصابين بالحدد الدموي (الهيموسيدروسز) ذي الصلة بنقل الدم والمعالجين بأقراص ديفيرازيروكس المسحوقة المغلفة بطبقة رقيقة

Health conditions/problem studied: Specify
Transfusional Hemosiderosis

Interventions: Specify
Drug: Deferasirox
Deferosirox is provided in tablet forms of 90, 180 and 360mg. Tablets must be crushed.

Other Name: ICL670

Key inclusion and exclusion criteria: Inclusion criteria
1.Patients ≥2 to <6 years old diagnosed with transfusional hemosiderosis

2.Documented history of red blood cell transfusions
3.Written informed consent/assent before any study-specific procedures. The consent will be obtained from caregiver(s) or patient's legal representative. Investigators will also obtain assent of patients according to local, regional, or national regulations.
4.For patients on prior DFX: Serum ferritin (SF) >500 ng/mL, measured at screening visit 1 and requiring a DFX daily dose equivalent to FCT ≥ 7mg/kg/day.
5.For patients on a prior chelator other than DFX (e.g. deferiprone or deferoxamine) or chelation naive: Serum ferritin (SF) >1000 ng/mL measured at screening visits 1 and 2.

Key inclusion and exclusion criteria: Gender

Both

Key inclusion and exclusion criteria: Specify gender

Key inclusion and exclusion criteria: Age minimum

2

Key inclusion and exclusion criteria: Age maximum

6

Key inclusion and exclusion criteria: Exclusion criteria

1.Patients that receive more than one iron chelator at the same time as current iron chelation treatment. (Patients who have received combination therapy in their medical history but are currently being treated with a single ICT agent are eligible.)

2.Patients continuing on deferoxamine or deferiprone in addition to study treatment.

(Patients switching to or continuing on deferasirox are eligible).

3.Unresolved adverse events if the patient was previously treated with deferiprone or deferoxamine or deferasirox.
4.Significant proteinuria as indicated by a urinary protein/creatinine ratio > 0.5 mg/mg in a non-first void sample urine measured at screening visit 1.
5.Serum creatinine > age adjusted ULN measured at any screening visit
6.Creatinine clearance below 90 mL/minute measured at any screening visit. Creatinine clearance using the Schwartz formula will be estimated from serum creatinine measured at each respective visit.
7.ALT and/or AST > 2.5 x ULN measured at screening visit 1.
8.Total bilirubin (TBIL) >1.5 x ULN measured at screening visit 1.
9.Patients with significant impaired GI function or GI disease that may significantly alter the absorption of oral deferasirox FCT (e.g. ulcerative diseases, uncontrolled nausea, vomiting, diarrhea, malabsorption syndrome, or small bowel resection).
10.History of and/or laboratory evidence of active Hepatitis B or Hepatitis C (HBsAg in the absence of HBsAb OR HCV Ab positive with HCV RNA positive.
11.Liver disease with severity of Child-Pugh Class B or C.
12.History of hypersensitivity to any of the study drug or excipients.
13.Patients participating in another clinical trial or receiving an investigational drug.
14.Patients with a known history of HIV seropositivity.
15.Patients unwilling or unable to comply with the protocol.
16.History of malignancy of any organ system, treated or untreated, within the past 5 years whether or not there is evidence of local recurrence or metastases, with the exception of localized basal cell carcinoma of the skin.

17.Significant medical condition interfering with the ability to partake in this study (e.g.

uncontrolled hypertension, unstable cardiac disease not controlled by standard medical therapy, systemic disease: cardiovascular, renal, hepatic, etc.).

18.Female patients who reach menarche and they or their caregivers refuse pregnancy testing and/or if there is a positive pregnancy test result.
