Public title
Study of Efficacy and Safety of Pembrolizumab Plus Platinum-based Doublet Chemotherapy With or Without Canakinumab in Previously Untreated Locally Advanced or Metastatic Non-squamous and Squamous NSCLC Subjects (CANOPY 1)

Acronym
CANOPY 1

Scientific title
A Randomized, Double-blind, Placebo-controlled, Phase III Study Evaluating the Efficacy and Safety of Pembrolizumab Plus Platinum -based Doublet Chemotherapy With or Without Canakinumab as First Line Therapy for Locally Advanced or Metastatic Non-squamous and Squamous Non-small Cell Lung Cancer Subjects (CANOPY-1)

Acronym

Brief summary of the study: English
This is a phase III study of pembrolizumab plus platinum-based doublet chemotherapy with or without canakinumab in previously untreated locally advanced or metastatic non-squamous and squamous NSCLC subjects.

The study will assess primarily the safety and tolerability (safety run -in part) of pembrolizumab plus platinum-based doublet chemotherapy with canakinumab and then the efficacy (double-blind, randomized, placebo controlled part) of pembrolizumab plus platinum-based doublet chemotherapy with or without canakinumab.

Brief summary of the study: Arabic

دراسة مرحلة ثالثة عشوائيّة التوزيع مزدوجة التعمية مرتكزة على المقارنة بدواء وهميّ لتقييم فعاليّة وسلامة دواء بمبروليزوماب بالإضافة إلى العلاج الكيميائي المزدوج القائم على البلاتين مع أو بدون كاناكينوماب كعلاج أساسيّ لدى المرضى المصابين بسرطان الرئة ذي الخلايا غير الصغيرة غير الحرشفي والحرشفي المتقدّم محليًّا أو النقيلي (كانوبي-1)

Health conditions/problem studied: Specify

Patients with Non-Small Cell Lung Cancer

Interventions: Specify

•Drug: canakinumab
canakinumab every 3 weeks (squamous and non-squamous)

Other Name: ACZ885

•Drug: canakinumab matching placebo
canakinumab placebo every 3 weeks (squamous and non-squamous)

•Drug: pembrolizumab
200 mg every 3 weeks (squamous and non-squamous)

•Drug: carboplatin
AUC 5 mg/mL*min every 3 weeks (non-squamous) or AUC 6 mg/mL*min (squamous)

•Drug: cisplatin
75 mg/m2 every 3 weeks (non-squamous)

•Drug: paclitaxel
200 mg/m2 every 3 weeks (squamous)

•Drug: nab-paclitaxel
100 mg/m2 every 3 weeks (squamous)

•Drug: pemetrexed
500 mg/m2 every 3 weeks (non-squamous)

Key inclusion and exclusion criteria: Inclusion criteria

Key inclusion criteria:
•Histologically confirmed locally advanced stage IIIB or stage IV NSCLC for treatment in the first-line setting
•Known PD-L1 status determined by a Novartis designated central laboratory. A newly obtained tissue biopsy or an archival biopsy (block or slides) is required for PD-L1 determination (PD-L1 IHC 22C3 pharmDx assay), prior to study randomization. Note: For the safety run-in part, known PD-L1 status is not required.
•Eastern Cooperative oncology group (ECOG) performance status of 0 or 1.
•At least 1 measurable lesion by RECIST 1.1

Key inclusion and exclusion criteria: Gender

Both

Key inclusion and exclusion criteria: Specify gender

Key inclusion and exclusion criteria: Age minimum

18

Key inclusion and exclusion criteria: Age maximum

90

Key inclusion and exclusion criteria: Exclusion criteria

Key exclusion criteria:
•Previous immunotherapy (e.g. anti-PD-1, anti-PD-L1, anti-PD-L2, anti-CTLA-4 antibody, or any other antibody or drug specifically targeting T-cell co-stimulation or immune checkpoint pathways).
•Prior treatment with canakinumab or drugs of a similar mechanism of action (IL-1β inhibitor).
•Subjects with epidermal growth factor receptor (EGFR) sensitizing mutations (identified in exons 19, 20, or 21), and/or ALK rearrangement by locally approved laboratory testing.
•Previously untreated or symptomatic central nervous system (CNS) metastases or lepto-meningeal disease.
•Subject with suspected or proven immune-compromised state or infections.
•Subject has prior to starting study drug: received live vaccination ≤3 months, had major surgery ≤4 weeks prior to starting study drug, has thoracic radiotherapy: lung fields ≤ 4 weeks, other anatomic sites ≤ 2 weeks, palliative radiotherapy for bone lesions ≤ 2 weeks.

Other protocol-defined inclusion/exclusion criteria may apply.

IMP has market authorization

Yes, Worldwide

IMP has market authorization: Specify

Argentina, Australia, Canada, Belgium, Bahrain, Brazil, Chile, Austria, Denmark, France, Germany, India, Italy, Japan...

Name of IMP

Canakinumab (ACZ885)

Year of authorization

Month of authorization

Type of IMP

Immunological

Pharmaceutical class

Monoclonal Antibody-IL1B Inhibitor

Therapeutic indication

Histologically confirmed locally advanced stage IIIB or stage IV NSCLC

Therapeutic benefit

Progression free survival (PFS) per investigator assessment using RECIST v1.1
Overall response rate (ORR) per investigator assessment using RECIST v1.

IPD sharing statement plan

No

IPD sharing statement description

Novartis is committed to sharing with qualified external researchers, access to patient-level data and supporting clinical documents from eligible studies. These requests are reviewed and approved by an independent expert panel on the basis of scientific merit. All data provided is anonymized to respect the privacy of patients who have participated in the trial in line with applicable laws and regulations.

This trial data is currently available according to the process described on www.clinicalstudydatarequest.com.
