

# Study of Safety of QAW039 in Patients With Asthma Inadequately Controlled on Standard-of-care Asthma Treatment

17/07/2025 02:51:24

## Main Information

**Primary registry identifying number**

LBCTR2019121309

**Protocol number**

CQAW039A2315

**MOH registration number**

23137/2018

**Study registered at the country of origin**

Yes

**Study registered at the country of origin: Specify****Type of registration**

Retrospective

**Type of registration: Justify**

This was earlier submitted as paper before implementation of LBCTR , this study still have patients ongoing until 2022

**Date of registration in national regulatory agency**

31/05/2018

**Primary sponsor**

Novartis Pharma Services Inc.

**Primary sponsor: Country of origin**

Novartis Pharma Services Inc.

**Date of registration in primary registry**

20/03/2020

**Date of registration in national regulatory agency**

31/05/2018

**Public title**

Study of Safety of QAW039 in Patients With Asthma Inadequately Controlled on Standard-of-care Asthma Treatment

**Acronym****Scientific title**

A 2-treatment Period, Randomized, Placebo-controlled, Multicenter Parallel-group Study to Assess the Safety of QAW039 When Added to Existing Asthma Therapy in GINA Steps 3, 4 and 5 Patients With Uncontrolled Asthma.

**Acronym****Brief summary of the study: English**

This study is a 2-treatment period, randomized, multicenter parallel-group study. The overall purpose of this study is to provide long-term safety data for fevipiprant (QAW039) (Dose 1 and Dose 2), compared with placebo, when added to the Global Initiative for Asthma (GINA) steps 3, 4, and 5 standard-of-care (SoC) asthma therapy (GINA 2016), in patients with moderate-to- severe asthma.

**Brief summary of the study: Arabic**

عندما QAW039 دراسة متوازنة المجموعة ومتعددة المراكز ومراقبة الدواء الوهمي وعشوائية التوزيع ذات فترتي علاج لتقييم سلامة دواء حسب المبادرة العالمية للرئوي المصابين بالرئوي غير المتحكم به 5 و 4 ويُضاف إلى علاج الرئوي الحالي لدى مرضى المراحل

**Health conditions/problem studied: Specify**

Respiratory - Asthma

**Interventions: Specify**

•Drug: QAW039 Dose 1  
QAW039 Dose 1 once daily

•Drug: QAW039 Dose 2  
QAW039 Dose 2 once daily

•Drug: Placebo  
Placebo once daily

**Key inclusion and exclusion criteria: Inclusion criteria****Inclusion Criteria:**

Patients completing a prior Phase 3 study of QAW039:

- Informed consent and assent (if applicable).
- Completion of the Treatment Period (on blinded study drug) of a prior Phase 3 study of QAW039.
- Patient is able to safely continue into the study as judged by the investigator.

Patients who have not previously participated in a study of QAW039:

- Written informed consent.
- A diagnosis of asthma,uncontrolled on GINA 3/4/5 asthma medication.
- Evidence of airway reversibility or airway hyper- reactivity.
- FEV1 of  $\leq 85\%$  of the predicted normal value.
- An ACQ score  $\geq 1.5$  prior to entering the study.

**Key inclusion and exclusion criteria: Gender**

Both

**Key inclusion and exclusion criteria: Specify gender****Key inclusion and exclusion criteria: Age minimum**

12

**Key inclusion and exclusion criteria: Age maximum**

99

**Key inclusion and exclusion criteria: Exclusion criteria****Exclusion Criteria:**

Patients completing a prior phase 3 study of QAW039:

- Pregnant or nursing (lactating) women.
- Women of child-bearing potential unless they are using basic methods of contraception during dosing of study drug
- Patients who did not complete the Treatment Period on blinded study drug of the prior QAW039 study they participated in.
- Inability to comply with all study requirements.
- Patient who experienced a serious and drug-related AE in the prior QAW039 study they participated in.

Patients who have not previously participated in a study of QAW039:

- Use of other investigational drugs within 5 half-lives of study entry, or within 30 days, whichever is longer.
- Subjects who have participated in another trial of QAW039 (i.e.-the patient was randomized in another study).
- A QTcF (Fridericia)  $\geq 450$  msec (male) or  $\geq 460$  msec (female).
- History of malignancy with the exception of local basal cell carcinoma of the skin
- Pregnant or nursing (lactating) women.
- Serious co-morbidities.
- Patients on greater than 20 mg of simvastatin> 40 mg of atorvastatin, >40 mg of pravastatin, or >2 mg of pitavastatin. Statin doses less than or equal to these doses as well as other statins will be permitted during the study.

<b>Therapeutic indication</b>		
GINA steps 3, 4 and 5 patients with uncontrolled asthma		
<b>Therapeutic benefit</b>		
QAW has a function on lung function (FEV1) in patients with moderate-to-severe asthma, and an improvement in quality-of-life scores and asthma control questionnaire scores in severe patients uncontrolled at baseline. In one study, QAW039 also demonstrated a reduction in sputum eosinophils in patients with severe asthma. The overall purpose of this study is to provide long-term safety data for fevipirant (QAW039) (150 mg once daily and 450 mg once daily), compared with placebo, when added to the Global Initiative for Asthma (GINA) steps 3, 4, and 5 standard-of-care (SoC) asthma therapy (GINA 2016), in adult and adolescent ( $\geq 12$ years) patients with moderate-to-severe asthma.

**IPD sharing statement description**

Novartis is committed to sharing with qualified external researchers, access to patient-level data and supporting clinical documents from eligible studies. These requests are reviewed and approved by an independent review panel on the basis of scientific merit. All data provided is anonymized to respect the privacy of patients who have participated in the trial in line with applicable laws and regulations.

This trial data availability is according to the criteria and process described on [www.clinicalstudydatarequest.com](http://www.clinicalstudydatarequest.com)
