REPUBLIC OF LEBANON Lebanon Clinical Trials Registry

RADIANT 4 - Everolimus Plus Best Supportive Care vs Placebo Plus Best Supportive Care in the Treatment of Patients With Advanced Neuroendocrine Tumors (GI or Lung Origin)

11/09/2025 16:27:26

Primary registry identifying number	Protocol number
LBCTR2020011379	CRAD001T2302
MOH registration number	
ص/262	
Study registered at the country of origin	Study registered at the country of origin: Specify
Yes	
Type of registration	Type of registration: Justify
Retrospective	This study was submitted prior to LBCTR initiation
Date of registration in national regulatory agency 13/01/2015	
Primary sponsor	Primary sponsor: Country of origin
Novartis Pharmaceuticals	Novartis Pharmaceuticals
Date of registration in primary registry	Date of registration in national regulatory agency
04/01/2021	13/01/2015
Public title	Acronym
RADIANT 4 - Everolimus Plus Best Supportive Care vs Placebo Plus Best Supportive Care in the Treatment of Patients With Advanced Neuroendocrine Tumors (GI or Lung Origin)	
Scientific title	Acronym
A Randomized, Double-blind, Multicenter, Phase III Study of Everolimus (RAD001) Plus Best Supportive Care Versus Placebo Plus Best Supportive Care in the Treatment of Patients With Advanced NET of GI or Lung Origin	
Brief summary of the study: English	
The purpose of this study is to compare the antitumor activity of everolimus plus best supportive care versus placebo plus best supportive care in patients with advanced nonfunctional neuroendocrine tumor of gastrointestinal or lung origin.	
Brief summary of the study: Arabic	
(RAD001) إيفير وليمو @Everolimus در اسة عشوانية ومتعددة المراكز في المرحلة الثالثة لدواء م علاج المرضى المصابين بحالة متقدمة من أور ام الغدد الصم العصبية يكون مصدر ها معديًا معويًا أو 4مشع-(RADIANT-4) - رئويًا	
Health conditions/problem studied: Specify	
Advanced Nonfunctional NeuroEndocrine Tumor	
Interventions: Specify	
•Drug: Everolimus After randomization, patients will receive everolimus once daily until dise	ease progression intolerable toxicity, or consent withdrawal

 \sim

REPUBLIC OF LEBANON MINISTRY OF PUBLIC HEALTH Lebanon Clinical Trials Registry

•Drug: Everolimus Placebo After randomization, patients will receive everolimus placebo once daily until disease progression, intolerable toxicity, or consent withdrawal				
Key inclusion and exclusion criteria: Inclusion criteria				
 Pathologically confirmed, well differentiated (G1 or G2), advanced (unresectable or metastatic), neuroendocrine tumor of GI or lung origin No history of and no active symptoms related to carcinoid syndrome In addition to treatment-naive patients, patients previously treated with SSA, Interferon (IFN), one prior line of chemotherapy, and/or PRRT a allowed into the study. Pretreated patients must have progressed on or after the last treatment Radiological documented disease progression within 6 months prior to randomization WHO performance status ≤1 Adequate bone marrow, liver and renal function 				
Key inclusion and exclusion criteria: Gender	Key inclusion and exclusion criteria: Specify gender			
Both				
Key inclusion and exclusion criteria: Age minimum	Key inclusion and exclusion criteria: Age maximum			
18	99			
Key inclusion and exclusion criteria: Exclusion criteria				
 Patients with poorly differentiated neuroendocrine carcinoma, high-grade n carcinoma, insulinoma, glucagonoma, gastrinoma, goblet cell carcinoid, large Patients with pancreatic NET or NET of origins other than GI or Lung Patients with history of or active symptoms of carcinoid syndrome (e.g. flus Patients with more than one line of prior chemotherapy Prior targeted therapy Hepatic locoregional therapy within the last 6 months Prior therapy with mTOR inhibitors (e.g. sirolimus, temsirolimus, deforolimu Known intolerance or hypersensitivity to everolimus or other rapamycin ana Known impairment of gastrointestinal (GI) function or GI disease that may s Uncontrolled diabetes mellitus as defined by HbA1c >8% despite adequate 	ge cell neuroendocrine carcinoma and small cell carcinoma shing, diarrhea) Is) alogs (e.g. sirolimus, temsirolimus) significantly alter the absorption of oral everolimus			
 Patients who have any severe and/or uncontrolled medical conditions such as: unstable angina pectoris, symptomatic congestive heart failure, myocardial infarction ≤6 months prior to randomization, serious uncontrolled cardiac arrhythmia active or uncontrolled severe infection liver disease such as cirrhosis, decompensated liver disease, and chronic hepatitis (i.e. quantifiable HBV-DNA and/or positive HbsAg, quantifiable HCV-RNA) 				
 Chronic treatment with corticosteroids or other immunosuppressive agents Known history of HIV seropositivity Pregnant or nursing (lactating) women 				
Other protocol-defined inclusion/exclusion criteria may apply.
