Lebanon Clinical Trials Registry

| Primary Outcomes | | | |
|---------------------------------|-------------------------------|--|--|
| Name | Time Points | Measure | |
| Progression free survival (PFS) | Approximately up to 24 months | PFS is the time from date of randomization/start of treatment to the date of event defined as the first documented progression or death due to any cause. PFS is based on central assessment and using RECIST 1.1 criteria | |

| Key Secondary Outcomes | | |
|--|----------------------------------|---|
| Name | Time Points | Measure |
| Overall Survival (OS) | Approximately up to 33 months | OS is defined as the time from date of randomization to date of death due to any cause |
| Overall Response Rate (ORR) | Approximately up to 33 months | ORR is defined as the proportion of patients with best overall response of complete response (CR) or partial response (PR) based on central and local investigator's assessment according to RECIST 1.1. |
| Disease Control Rate (DCR) | Approximately up to 33 months | DCR is defined as the proportion of participants with Best Overall Response (BOR) of Complete Response (CR), Partial Response (PR), Stable Disease (SD) or Non-CR/Non-PD. |
| Time To Response (TTR) | Approximately up to 33 months | TTR is defined as the time from the date of randomization to the date of first documented response (CR or PR, which must be confirmed subsequently) |
| Duration of Response (DOR) | Approximately up to 33 months | DOR is calculated as the time from the date of first documented response (complete response (CR) or partial response (PR)) to the first documented date of progression or death due to underlying cancer. |
| Progression-Free Survival after next line therapy (PFS2) | Approximately up to 33 months | PFS2 (based on local investigator assessment) is defined as time from date of randomization to the first documented progression on next line therapy or death from any cause, whichever occurs first. |
| Concentration of JDQ443 and its metabolite in plasma | Approximately up to 33 months | To characterize the pharmacokinetics of JDQ443 and its metabolite HZC320 |
| Time to definitive deterioration of Eastern Cooperative Group of Oncology Group (ECOG) performance status | Approximately up to 33 months | Deterioration of Eastern Cooperative Oncology Group (ECOG) Performance Status (PS) |
| Time to definitive 10-point deterioration symptom scores of chest pain, cough and dyspnea per QLQ-LC13 | Approximately up to 33 months | The EORTC QLQ LC13 is a 13-item, lung cancer specific questionnaire module, and it comprises both multi-item and single-item measures of lung cancer- associated symptoms (i.e. coughing, hemoptysis, dyspnea and pain) and side-effects from conventional chemo- and radiotherapy (i.e. hair loss, neuropathy, sore mouth and dysphagia). The time to definitive 10- point deterioration is defined as the time from the date of randomization to the date of event, which is defined as at least 10 points absolute increase from baseline (worsening), with no later change below the threshold or death due to any cause |

Lebanon Clinical Trials Registry

| Time to definitive deterioration in global health status/QoL, shortness of breath and pain per QLQ-C30 | Approximately up to 33 months | The EORTC QLQ-C30 is a questionnaire developed to assess the health-related quality of life of cancer participants. The questionnaire contains 30 items and is composed of both multi-item scales and single-item measures based on the participants experience over the past week. These include five domains (physical, role, emotional, cognitive and social functioning), three symptom scales (fatigue, nausea/vomiting, and pain), six single items (dyspnea, insomnia, appetite loss, constipation, diarrhea and financial impact) and a global health status/HRQoL scale. The time to definitive 10-point deterioration is defined as the time from the date of randomization to the date of event, which is defined as at least 10 points absolute increase from baseline (worsening) of the corresponding scale score, with no later change below the threshold or death due to any cause |
|--|----------------------------------|---|
| Change from baseline in EORTC-QLQ-C30 | Approximately up to 33 months | The EORTC QLQ-C30 is a questionnaire developed to assess the health-related quality of life of cancer participants. The questionnaire contains 30 items and is composed of both multi-item scales and single-item measures based on the participants experience over the past week. These include five domains (physical, role, emotional, cognitive and social functioning), three symptom scales (fatigue, nausea/vomiting, and pain), six single items (dyspnea, insomnia, appetite loss, constipation, diarrhea and financial impact) and a global health status/HRQoL scale. A higher score indicates a higher presence of symptoms. |
| Change from baseline in EORTC-QLQ-LC13 | Approximately up to 33 months | The EORTC QLQ LC13 is a 13-item, lung cancer specific questionnaire module, and it comprises both multi-item and single-item measures of lung cancer- associated symptoms (i.e. coughing, hemoptysis, dyspnea and pain) and side-effects from conventional chemo- and radiotherapy (i.e. hair loss, neuropathy, sore mouth and dysphagia). A higher score indicates a higher presence of symptoms. |
| Change from baseline in EORTC-EQ-5D-5L | Approximately up to 33 months | The EQ-5D-5L is a generic instrument for describing and valuing health. It is based on a descriptive system that defines health in terms of 5 dimensions: Mobility, Self-Care, Usual Activities, Pain/Discomfort, and Anxiety/Depression. |
| Change from baseline in NSCLC-SAQ | Approximately up to 33 months | The Non-Small Cell Lung Cancer Symptom Assessment Questionnaire (NSCLC-SAQ) is a 7-item, patient-reported outcome measure which assess patient-reported symptoms associated with advanced NSCLC. It contains five domains and accompanying items that were identified as symptoms of NSCLC: cough (1 item), pain (2 items), dyspnea (1 item), fatigue (2 items), and appetite (1 item). |
| PFS based on KRAS G12C mutation status in plasma. | Approximately up to 33 months | To compare the clinical outcomes for JDQ443 vs docetaxel based on KRAS G12C mutation status in plasma |
| OS based on KRAS G12C mutation status in plasma. | Approximately up to 33 months | To compare the clinical outcomes for JDQ443 vs docetaxel based on KRAS G12C mutation status in plasma |
| ORR based on KRAS G12C mutation status in plasma | Approximately up to 33 months | To compare the clinical outcomes for JDQ443 vs docetaxel based on KRAS G12C mutation status in plasma |
